
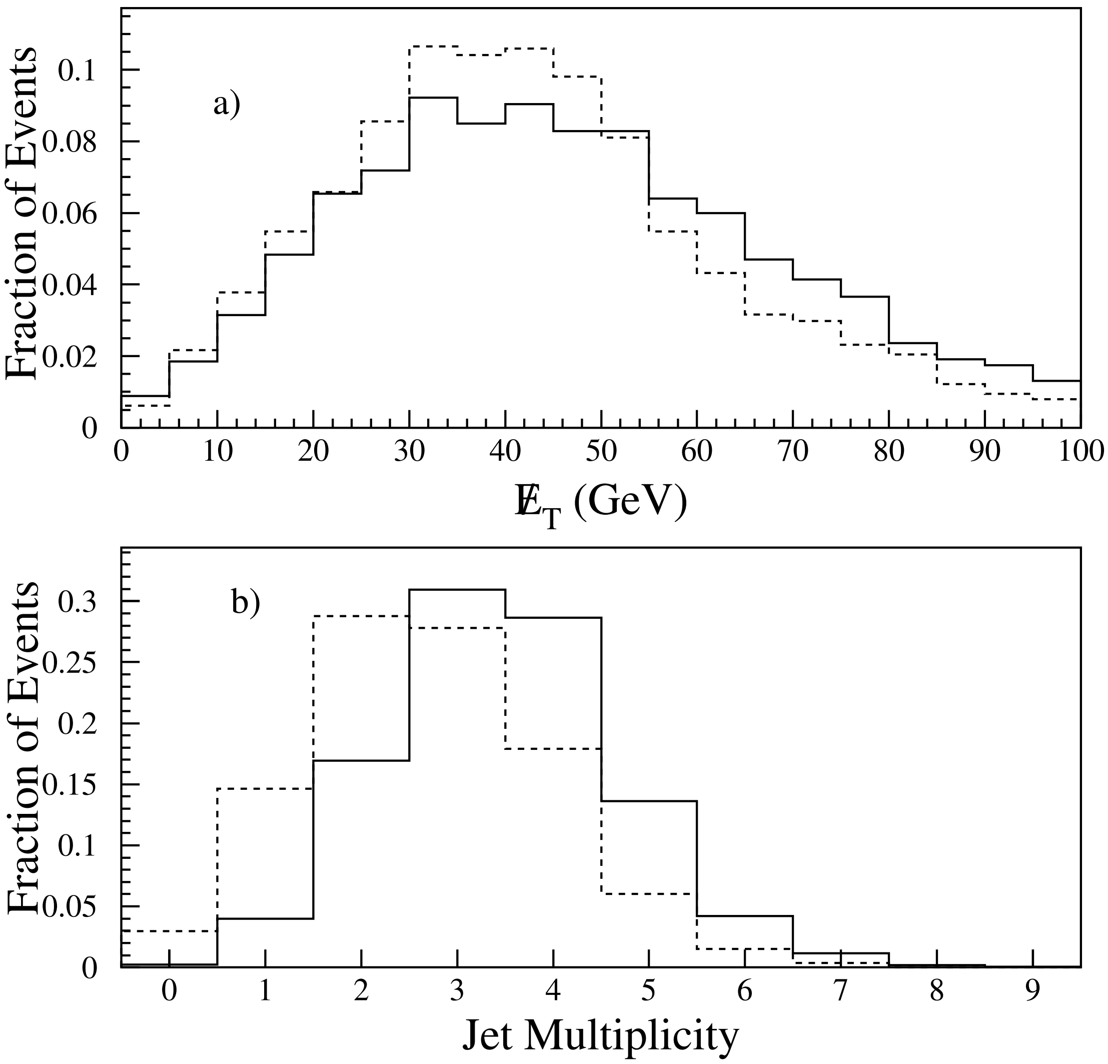

Figure 15: The $t\bar{t}$ Monte Carlo distribution of a) $\not\!\!E_T$ for events with a 20 GeV electron passing electron identification cuts, and b) the expected jet multiplicity distribution for events passing the W selection criteria. In both plots the dashed line is for M_{top} = 120 GeV/c^2 and the solid histogram is for M_{top} =180 GeV/c^2.
