
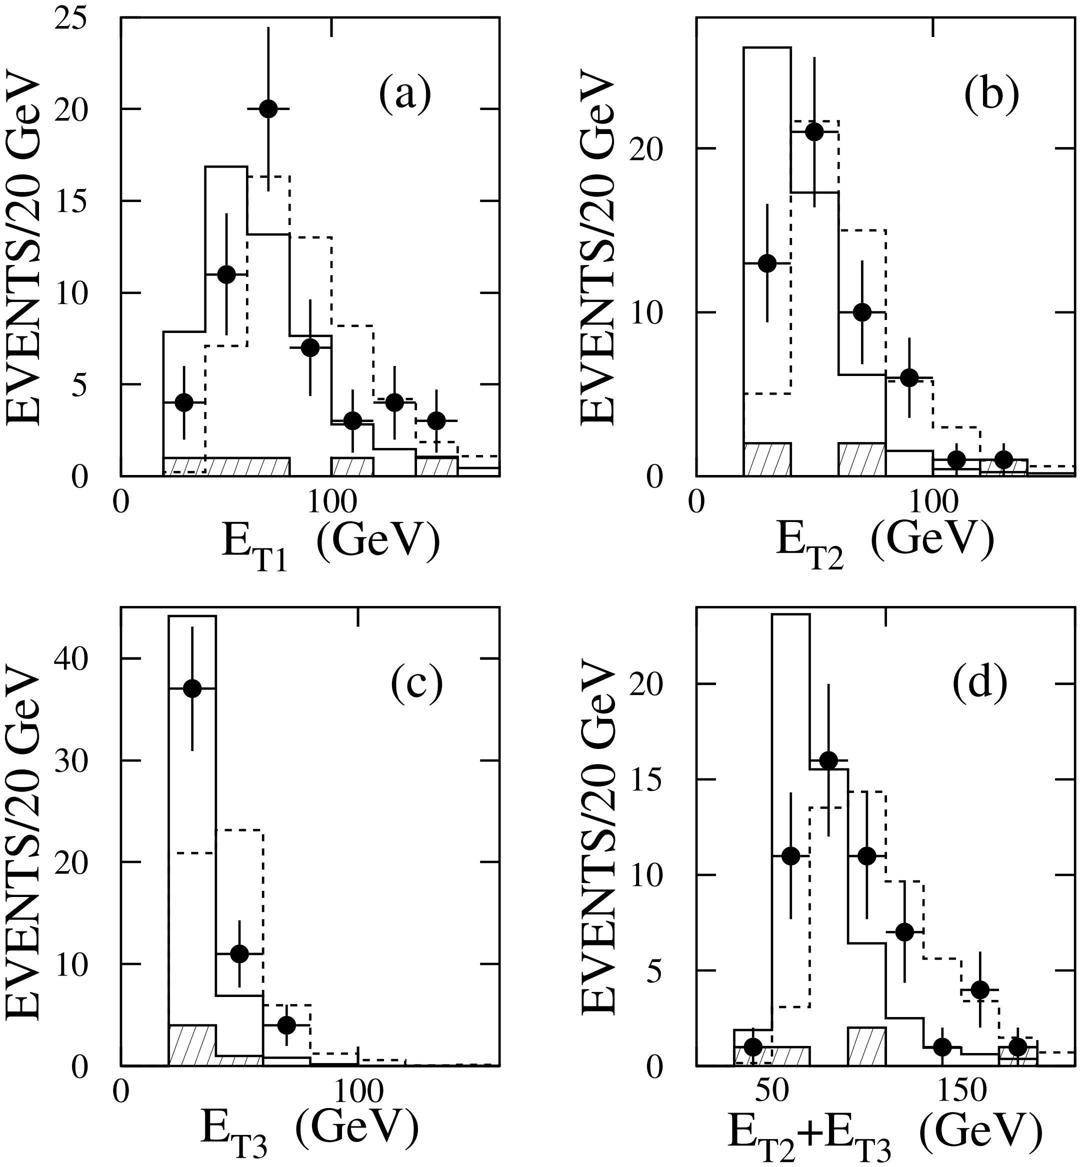

Figure 54: Jet transverse energy distributions for the 52 $W+$ 3 or more jet events (points) compared with VECBOS QCD $W+$ 3 or more jet predictions (histogram) and HERWIG $t\bar{t}$ predictions for $M_{top} = 160$ GeV/c^2 (broken histogram). The Monte Carlo predictions are normalized to the data. The hatched sub-histograms show the location of the 5 events discussed in the text which are identified as non-W backgrounds.
